BEAUTIFUL HAIR.

IN all ages, and by all nations and races, a fine head of Hair has ever been considered one of the most prominent characteristics of beauty. Poets have sung its praises ; the artist and the sculptor have vied with each other in representing it in its many forms of beauty ; and we see in marble and on canvass convincing evidences of the wonderful forms of beauty which the human hair may be made to assume, exciting our admiration and gratifying our taste. Among the ancients, beautiful hair was also highly valued ; then it was permitted to adorn the person, more by its simple native beauty than by the aid of art ; and the most beautiful relics of ancient sculpture are to-day the more admired for the faithfulness with which they portray the human hair in all its natural state of beauty. But, in consequence of the great haste and excitement in which we live, very few can boast of long and beautiful hair. Fully comprehending this condition, I have paid unwearied attention to diseases of the hair and scalp, and have prepared from the vegetable world a valuable article, called "CHEVALIER'S LIFE FOR THE HAIR," which is perfectly harmless ; can be used freely ; will positively restore gray hair to its original color ; strengthen and increase the growth of the weakest hair ; stops its falling out at once. At the same time it is a clean, healthy, and delightful hair-dressing, and is prepared expressly for family use. In presenting its claims, I ask the attention of the old, the young, and the middle-aged.

SARAH A. CHEVALIER, M.D.,

1123 Broadway, N. Y.

A TREATISE

ON THE

STRUCTURE OF THE HUMAN HAIR.

STRUCTURE OF THE HUMAN HAIR.

THE hairs are appendages of the skin contributing to its defense like the scarfskin, of which latter they may be regarded as modifications for a particular use. The hairs traverse the skin like the perspiratory oil-tubes ; within the skin each hair is inclosed in a sheath or tube, which supports the root of the hair. Every part of the skin, with the exception of the palms of the hands and soles of the feet, is organized for the production of hair ; on most of the body, being soft, short, and fine ; in many instances so delicate as scarcely to rise above the level of the skin. When the hair is left to its natural growth it attains a certain length, and is then thrown off by a process similar to the change of the coat on animals, or the moult of birds ; its place is supplied by young hair which grows from the same tubes, and this temporary decadence of the hair occurs when it is kept cut at a moderate length ; the hair becomes pointed

at its extremity after being cut, by a process of deposition, on the ends, of certain fluids containing horny matter in solution, which makes its way from the roots of the hair through the center of its shaft; hence, when "LIFE FOR THE HAIR" is applied freely, it will impart all the natural nutriment which the hair has lost by cutting. Many ladies suppose it is well to clip their hair at the ends at certain periods. This generally causes it to split, and is by no means a judicious practice.

CHEMICAL ANALYSIS OF THE HAIR.

CHEMICAL analysis shows the hair to be composed of a basis of animal matter (albumen) of a certain preparation of ashy substance; of the salts of lime which enter into the compositions, of bone, of flint, of sulphur, and magnesia. The quantity of sulphur is somewhat considerable, and it is this substance which is the principal cause of the disagreeable odor from the hair during combustion. The constituents of hair of various colors also present considerable difference; for example, red hair presents a reddish-colored oil, and a large proportion of sulphur; fair hair, a white oil, with phosphate of magnesia; in the white hair of the aged is found a considerable quantity of bone, earth, or phosphate of lime. According to the latest analysis, fair hair contains the least carbon and hydrogen, and the most oxygen and

sulphur; black hair follows next; white and brown hair give the largest proportion of carbon, with somewhat less hydrogen than black hair, and the smallest quantity of oxygen and sulphur. The hair of the beard is found to contain more carbon and hydrogen than the hair of the head, and less oxygen and sulphur; the quantity of nitrogen is the same in all.

The frequent appearance of animal matter in the hair is the cause of the hygrometric phenomena which it is known to evince. Animal matter having saline substances entering into its composition has a greater disposition to attract fluids from the atmosphere; and when this occurs, the shaft of the hair becomes swollen and straightened; when, on the contrary, the hair contains a larger proportion of oily substances, the influence of the animal matter and salts in the absorption of aqueous fluid is checked; and the hair will maintain its natural healthy action by the frequent use of "LIFE FOR THE HAIR," as it soothes and quiets whilst it cools the scalp, thereby preventing aptitude for assuming an electrical condition. Hair becomes negative, in reference to electricity, by friction. It is also a condenser and bad conductor of electric fluids. I have known several persons, previous to using "LIFE FOR THE HAIR," who were great sufferers from neuralgia of the head; one lady in particular, whose hair, while under the influence of this distressing malady, would become highly electrical, so that when it was let down at night

each hair would repel its neighbor, and every hair hang separate from the rest, giving the entire head a most remarkable appearance ; and we all experience the crackling condition of our own hair during the dry atmosphere, particularly during the prevalence of strong winds. All those thus afflicted, by using "LIFE FOR THE HAIR," will substantiate its value.

PURPOSES OF THE HAIR.

WE come now to the purposes of the hair in the animal economy. That it effects an important one, we have evidence in its universal distribution among animals ; and, if we admit the analogy between feathers and hair, among all warm-blooded animals. As a bad conductor of heat, certainly it tends to preserve the warmth of the body, and has that effect upon the head, and with natural care and treatment will serve to equalize the temperature of the brain. "LIFE FOR THE HAIR" is a sure agent of defense against external irritants, as the heat of the sun's rays or the bites of insects. Of special purposes fulfilled by the hair, we have instances in the eye-brows and eye-lids, which are beautifully adapted for the defense of the organs of vision ; in the small hairs which grow in the aperture of the nostrils, and serve as guardians to the delicate membranes of the nose, and in similar hairs in the ear-tubes, which defend these cavities from foreign aggression.

How distinctly we feel the movement of a fly on the head, although this little creature is at some distance from the skin ! We find that the hair will transmit any dressing it receives to the sensitive roots or bulbs of the hair. "LIFE FOR THE HAIR" being a rich, pigmentary, and harmless fluid, will impart the natural nutrition to the roots and sensitive bulbs ; hence it gives strength and health to the weakest hair, while it restores gray hair to its original color and youthful beauty.

THE COLOR OF THE HAIR.

THE fibrous part of the hair is the seat of its color. In viewing a hair with a microscope, it is evident the pigment is not regular, as some cells contain more than others ; it is from the unequal mingling of the colored with the uncolored, that the tint of hair depends. The fibrous portion of the hair is the source of its strength, and the degree of strength possessed by these delicate threads is almost incredible. When a healthy hair is freshly plucked, its root has a round, swollen appearance, well expressed by the term bulb, and it presents certain varieties of aspect, sometimes perfectly straight, and sometimes clubbed and bent ; these appearances are the consequences of the degree of violence used in their removal. That portion of the shaft of the hair which is contained within the hair-tube is steadied in its

position by contact with the living scarfskin of the tube, and as the latter is continually undergoing the process of formation, the scales of the sheath are moved by the growing hair, and are then scattered on the surface in the form of scurf or dandruff. "LIFE FOR THE HAIR" will keep this scurf from accumulating, while it will give a healthy action to the scalp, thus rendering great relief to any one having an over-taxed brain or nervous temperament, and thereby strengthening the memory.

HYGIENIC TREATMENT FOR THE HAIR.

WHEN the powers of the system are on the wane, the hair is among the first of the organs of the body to evince infirmity ; then it is that the hair and scalp require treatment of a cooling, healthy, and nutritious nature. "LIFE FOR THE HAIR" has been found to contain the only vegetable properties known to relieve the nervous action of the scalp and head, and in most cases to remove those painful headaches which so many suffer from, and which can positively be relieved and permanently removed by the use of this invaluable article, as hundreds have testified to me. From my first and early professional education I have paid great attention to diseases of the hair and scalp, from the fact that my own hair turned gray at a very early age, for which no reasonable cause could be assigned. It has been a question to what

extent the hair, after its growth is completed, is susceptible of influence proceeding from its formative element, the skin; or, in other words, whether it is capable of imbibing fluid when applied as a dressing; if so, this power of imbibition must extend to the entire length of the shaft, and is not limited to that portion of the hair which is contained within the hair-tubes. "LIFE FOR THE HAIR," if regularly used, will produce the required health to the hair, which will be found full, glossy, and rich in its hues; while the absorption of the nutritive juice of the dressing, which contains the proper proportions of albuminous substances, renders it clean and healthy, as well as a delicate hair-dressing for young persons. Being perfectly harmless, it can be used as freely as water at any period of life.

CHARACTERISTICS OF THE HAIR.

PERSONS out of health may lose the healthy appearance of the hair, and it may become lank and straight from the imbibition of a hair-dressing imperfect in composition; while in another there may be a total absence of any nutritive juice, and the hair, as a consequence, will become dry, faded, and, as indeed is generally the case, dead. That these phenomena do take place in the hair we are satisfied from frequent experience, that whatever is used as a dressing will penetrate to the extreme ends of

each spray or spear of hair. Now, if it is really true that the hair is susceptible of treatment, with what care should it be cultivated ! But the mysteries of chemistry are unknown to many who make preparations for the hair, which are heralded as the only good article offered to the public.

Julius Cæsar, in his Commentaries, informs us how proud the ancient Gauls were of long and beautiful hair, and that they considered it conferred a special honor on the wearer. He also assures us that he could not inflict any greater mortification on them than by compelling them to cut their hair as a mark of submission, and thenceforth, for a long time, cropped hair became a mark of servitude or a token of inferiority. In the middle ages, flowing locks were the peculiar privilege of royalty ; while for all other persons there were gradations in the length and peculiar cut of the hair, according to the rank they possessed—from the noble down to the close-cropped slave.

Thus we perceive that beautiful hair has, in all ages and stages of society, been highly valued and prized ; and when we consider that “CHEVALIER’S LIFE FOR THE HAIR” possesses the life-giving and restorative principles which produce and preserve the growth of the hair, we can certainly not over-estimate the value of this great scientific achievement.

EARLY BLANCHING OF THE HAIR.

BLANCHING of the hair derives an important illustration from the animal kingdom. It is by no means uncommon to find instances of a gradual change or blanching of the hair, referable to a particular period of suffering, as was the case with Mary Queen of Scots and Marie Antoinette. We have instances in which blanching of the hair has resulted from disorganization of the skin, produced by inflammation or accident. Loosening of the hair frequently occurs on young persons as well as those of middle life, and, if neglected, will produce baldness. "LIFE FOR THE HAIR" will prevent its falling out, and arrest its progress when commenced, and will regulate and sustain the principles upon which the health and strength of the hair depend, containing, as it does, the proper nutriment for protecting the weak hair. I do not purpose in this little treatise to explain the various causes of the sudden blanching of the hair; suffice it to say, that at any critical moment in life, when nature is in revolution, and when, consequently, the natural functions are suspended, an agent is developed in the animal economy, and, passing into the hair, decomposes the coloring matter. This agent has been proved to be an acid, and "LIFE FOR THE HAIR" contains the only vegetable product known to neutralize this acid, thereby making the hair healthy and beautiful, and positively restoring gray hair to its

original color. We frequently find, when the hair is changing, that the coloring pigment ceases, and in its place appears a white, "sour," salty substance. This condition is real blanching of the hair. Then "LIFE FOR THE HAIR" should be used freely, and the blanching will disappear, and the hair will at once resume its healthy, original color, and soon will appear in all its strength and beauty. Premature blanching and loss of the hair may arise from the application of caustic washes, or ointments, badly elaborated, as well as from fever; and mental anxiety, or excess of alkali in the system, will cause gray hair. Every hair has a life of its own, and, by proper treatment, in the use of "LIFE FOR THE HAIR," the follicles will be found to produce fine, healthy hair, even to the latest period of life. Many are calling at my office daily to exhibit their beautiful hair, which, previously to using "LIFE FOR THE HAIR," had been thin and gray. "LIFE FOR THE HAIR" is warranted to restore gray hair to its original color; it stops its falling out at once, keeps the head clean, while it quiets the nervous action of the over-taxed brain; it is perfectly harmless, and will be found a delicate hair-dressing, even for children.

REMARKS IN RELATION TO THE HAIR.

MANY persons have their hair cut, and even shaved, closely, believing it will give health and strength to the new crop of hair. This is a habit which I do not recommend. Gentlemen should keep their hair of a becoming length, only allowing it to be clipped slightly at any one time. Ladies should never cut or clip the hair; it was given as an ornament, to adorn and beautify. Many use soap and borax with which to wash the hair, which, in many cases, prove very injurious, being harsh and crude, and destroying much of the natural, oily, nutritious substance which is required to strengthen, sustain, and nourish the hair. A damp sponge, with clean, tepid water, will remove any dust that accumulates on the surface of the hair; while "LIFE FOR THE HAIR" will continue to keep the scalp clean, clear of dandruff, scurvy, or any irritation, while it will strengthen and increase the growth of the weakest hair, thereby preserving it in all its health and beauty. In offering this invaluable article to my personal friends, as as well as to the public generally, I recommend it as a harmless vegetable hair-dressing. I am sensible of the great difficulties and prejudices I have to overcome, in consequence of the numerous preparations with which the market is flooded, all claiming the same properties, and promising to produce the same effects, many of which, when used, prejudice the consumer

against any article for restoring and preserving the hair. In justice to myself, I may add, that I submit for your perusal the testimony of the best scientific skill, the testimony of persons whose honor is unimpeachable, whose opinions command universal respect, and who would not, on any consideration, compromise their honor by any false recommendations. I feel that I have reason to congratulate myself on the public confidence in my invention, as its almost unprecedented sale is a good evidence of. I do not hesitate to recommend "LIFE FOR THE HAIR" as an article composed principally of vegetable substances, containing no dangerous ingredients, as possessing such properties as will restore the hair to its original color, and which every person, who has weak, falling-out, or gray hair, should use. The "LIFE FOR THE HAIR" is not a dye, but a restorative, rejuvenating the pores of the scalp, thereby producing a natural growth of hair in all its strength and beauty. I have long felt assured of the existence of such properties in the vegetable world, and after the most unwearied and incessant experiments, after fifteen years of scientific investigation and constant study, I feel confident that I have produced an article, in the "LIFE FOR THE HAIR," which will realize everything claimed for it, and be a lasting blessing to its consumers. And to-day every drug-store, without a single exception, in the city of New York, is selling "LIFE FOR THE HAIR," as well as the fancy-goods dealers and hair-dressers.

Many of them have been selling it since its first introduction, and the universal testimony is, that the sales are unprecedented. They say they have never known any article for the hair to give such perfect satisfaction to all its consumers, and the demand is rapidly increasing; and the reputation is so highly established, that it has become a subject of conversation in private circles. All proclaim its praise. This article has been thoroughly tested, and is recommended by the best medical authority in New York. In conclusion, I should add, that I am indebted to E. Wilson, M.D., for some suggestions contained in this work.

In closing this little treatise, I would say to all who desire beautiful, healthy, natural hair, who now have weak, falling-out, or gray hair, give "CHEVALIER'S LIFE FOR THE HAIR" a fair trial.

Sold by Druggists, Fancy-Goods Dealers, and Hair-Dressers, and at wholesale by houses mentioned on pages 21, 22, 23, and 24.

CERTIFICATES

IN FAVOR OF

CHEVALIER'S LIFE FOR THE HAIR.

NEW YORK CENTRAL PATENT MEDICINE DEPOT.
OFFICE OF F. C. WELLS & Co., WHOLESALE
DEALERS IN PROPRIETARY MEDICINES,
PERFUMERY, AND DRUGGISTS'
FANCY-GOODS.

192 FULTON ST., NEW YORK, Dec. 18, 1867.

MADAME S. A. CHEVALIER:

The extraordinary sale with which your valuable Hair Preparation ("*Life for the Hair*,") has met, exceeds any of the kind we have ever known, an undeniable proof that intrinsic merit will reap its just reward. We have always heard your preparation so highly spoken of by those who have purchased, that we have always had great pleasure in recommending it; a feeling we do not experience with "other" preparations.

Please send us at once twenty gross of your "*Life for the Hair*," as we are entirely out. We would order more, were it not that it is so near the close of the year, and we are anxious to run our stock low.

Yours, very truly,

F. C. WELLS & CO.

READ WHAT ONE OF OUR PROMINENT PHYSICIANS OF
THIS CITY SAYS:

NEW YORK, January 2, 1868.

I have been acquainted with Mrs. S. A. CHEVALIER, M.D., for over ten (10) years, and have had the most ample opportunity of observing her character, and of judging her attainments. I have no hesitation in expressing my unqualified approbation of the high and

honorable principles by which she is influenced, and the ladylike way in which she has invariably conducted herself.

Her mind is capacious and well regulated, her understanding clear and cultivated, and her judgment sound. As to her professional acquirements, they are solid, extensive, and well calculated to enable her to practise with honor to herself and with the best results to her patients.

For some years she has made the study of the Hair, its growth, development, and changes, a specialty, and has compounded a preparation now universally known as "*Life for the Hair*." The elements of which it is composed are perfectly simple and innocuous, and cannot in any case be injurious to the most delicate scalp.

I have recommended its use in various cases. In every instance it has given the utmost satisfaction, and accomplished all that is claimed for it.

JAMES W. POWELL, M.D.,
35 East Twenty-first St., N. Y.

READ WHAT THE REV. DR. TRAVIS SAYS.

NEW YORK, December 10, 1867.

Dr. S. A. CHEVALIER, 1123 Broadway, New York:

Dear Madam—I cheerfully bear testimony and give the expression of my humble opinion to your truly great scientific achievement, "*Chevalier's Life for the Hair*," which certainly will insure for you a lasting reputation as a chemist, and the grateful acknowledgment of all its consumers. I believe your article to be superior, and have a better effect on the head and hair, than any other hair-dressing or hair restorative in the market. I have tried a number of articles which have been highly recommended, but never found anything to compete with your preparation. My wife is equally charmed with its wonderful effects. We cordially recommend it to all, far or near, who desire an article to restore gray hair to its original color, promote its growth, and being at the same time a delightful hair-dressing.

EDWARD L. TRAVIS, D.D.,
Hammond St., N. Y.

READ WHAT THE REV. DR. HODGE'S WIFE SAYS.

BROOKLYN, January 1, 1868.

SARAH A. CHEVALIER, M.D. :

Dear Madam—I have very great pleasure in furnishing this testimony to the efficacy of your "*Life for the Hair*." I have made the most thorough trial of its qualities, and am prepared to give it the strongest commendation. It is certainly all you claim for it. My hair is very much improved from its use every way. I should be glad to know that its virtues were everywhere appreciated.

Respectfully yours, &c.,
MRS. S. P. HODGE.

SARAH A. CHEVALIER, M.D. :

My hair for years has been gray and falling out, until the surface of the scalp had become quite bare. I was persuaded to use your preparation, "*Chevalier's Life for the Hair*," and was astonished to see how rapidly it began to do its work. I found it soothing as well as quieting to my head. My hair is now nearly as heavy as it ever was, and has its original color, dark brown. It is as healthy and as youthful as ever. I do not believe that science has ever produced a preparation so harmless, that can compare with "*Chevalier's Life for the Hair*," for restoring gray hair to its original color and youthful strength and beauty. Myself and family all use it.

DR. I. H. HOW,
142 Amity Street.

NEW YORK, December 26, 1867.

SARAH A. CHEVALIER, M.D. :

Madam—I have been using your preparation, called "*Life for the Hair*," for two years. My hair was gray and very thin before using. I now have my hair its original color, and very much thicker. I cheerfully recommend "*Life for the Hair*" to all who desire a healthy hair-dressing of any kind.

MRS. DR. J. M. GLEASON,
Ninth Street, N. Y.

NEW YORK, December, 28, 1867.

Dr. SARAH A. CHEVALIER

Dear Madam—I am using your "*Life for the Hair*" with great confidence, as it has entirely removed my headache, which has been a standing disease with me for years; it has also restored my hair, which was gray, to its original color, as well as making it much heavier. I have tried various other preparations, but consider "*Life for the Hair*" the only safe and genuine article I have ever found. I have talked with many persons about its wonderful, soothing effects. I give this testimonial freely for the benefit of humanity, and I would voluntarily state that I consider SARAH A. CHEVALIER, M.D., entitled to all praise and confidence.

C. M. CLARK,

Sexton of Trinity Chapel.

NEW YORK, November 1, 1867.

Dr. SARAH A. CHEVALIER:

We cheerfully give you our impression in relation to your article of "*Life for the Hair.*" We have been using it for some years, and continue to do so with great satisfaction. We have found it a very desirable article in our family. We all use it and would not be without it; the children are pleased with it. As a hair-dressing we find that it restores our gray hair to its original color, while it keeps the head clean and healthy.

Yours, with kind regards,

MR. & MRS. G. N. HASKINS,
253 Fifth Avenue, N. Y.

NEW YORK, October 10, 1867.

Mrs. Dr. CHEVALIER:

It is with great satisfaction that I give my opinion about your invaluable article called "*Life for the Hair.*" I have used it for four years with great satisfaction. I have found it a delightful hair-dressing, much pleasanter than any French pomade. It has restored my hair, which was, or would have been, per-

fectly white (as I used to dye it for years), to its original color. My hair is now much heavier than it has been for some time; my head is clean, and gives me no trouble. All who have used it seem equally pleased. I believe it has only to be used to be fully appreciated by the consumer.

MRS. E. M. BELDON,

44 *West Twenty-first Street,*

(bet. Fifth and Sixth Avenues).

CHEVALIER'S LIFE FOR THE HAIR.--TO THE TRADE.

Having sold the above article for a number of years, we find it gives universal satisfaction, and the sale of same constantly increasing. We think we have not got at the present time a customer who does not sell the article; if so, we would suggest to them to purchase at once, as we are confident that by recommending and selling this article they will give entire satisfaction to their customers. It not only restores gray or faded hair to its original color and beauty, but is, at the same time, a superior hair-dressing

C. N. CRITTENTON,

Central Medicine Wholesale Warehouse, 7 Sixth Av., N. Y.

No. 21 PARK ROW, NEW YORK, Feb. 3, 1868.

Mrs. S. A. CHEVALIER:

Madam—Having sold your "*Life for the Hair*" largely for several years, we are happy to say we have always found it to give satisfaction to our customers in every respect.

The demand is constantly increasing. Please send twenty-five gross at once, as our stock is entirely exhausted.

Truly yours,
